INVESTMENT STRATEGIES:

EQUITY SCHEMES:

ICICI Prudential Infrastructure Fund - the Fund will inter-alia invest in companies, which are engaged in the area of infrastructure. The Scheme will invest in companies, which, in the opinion of the Fund Manager, offer an attractive investment opportunity to participate in the growth of the infrastructure sector. The stocks may be at any levels of market capitalization and Fund Manager will use growth investment styles.

ICICI Prudential Dynamic Plan - The Scheme proposes to invest primarily in equities and for defensive consideration in a mix of equity and/or fixed income securities including money market instruments with the aim of generating capital appreciation. With this aim the Investment Manager will allocate the assets of the Scheme between equity and/or fixed income securities. The actual percentage of investment in equities and fixed income securities will be decided after considering the prevailing market conditions, the macro economic environment (including interest rates and inflation), the performance of the corporate sector, the equity markets and general liquidity and other considerations in the economy and markets. The AMC may choose to continuously churn the portfolio of the Scheme in order to achieve the investment objective. This Scheme will trade actively in the capital market. The AMC will have the discretion to take aggressive asset calls i.e. by staying 100% invested in equity market/equity related instruments at a given point of time and 0% at another, in which case, the fund may be invested in debt related instruments at its discretion. Given the nature of the Scheme, the portfolio turnover ratio could be very high and AMC may change the full portfolio from say all Equity to all Cash and/or to all long /short term Bonds, commensurate with the investment objectives of the Scheme.

ICICI Prudential Focused Bluechip Equity Fund is an open ended Equity Scheme that seeks to generate long term capital appreciation and income distribution to unitholders from a portfolio that is invested in equity and equity related securities of about 20 companies belonging to the large cap domain and balance in debt securities and money market instruments. The Fund Manager will always select stocks for investment from among Top 200 stocks in terms of market capitalization on the National Stock Exchange of India Ltd. The Scheme aims to maximize long term total return by investing in equity and equity related securities of about 20 companies and the balance in debt securities and money market instruments. If the total assets under management under this scheme goes above Rs. 1,000 crore the Fund Manager reserves the right to increase the number of companies to more than 20. The scheme seeks to add the best opportunities that the market presents, without any sector bias. The Scheme shall adopt a disciplined yet flexible long-term approach to investing with a focus of generating long term capital appreciation. The Scheme will follow the bottom up approach to identify bargain stocks.

ICICI Prudential Tax Plan - the Fund believes that equities outperform all other asset classes in the long run. It further believes that anomalies exist in the valuation of stocks and that consistently applied fundamental research can identify these opportunities. The Fund will follow an active, value based investment style supported by in-house research. External research will be used whenever necessary. A value approach to stock picking will be the dominant theme in stock selection for the AMC. The AMC in selecting scrips will focus on the fundamentals of the business, the industry structure, the quality of management, sensitivity to economic factors, the financial strength of the company and the key earnings drivers.

ICICI Prudential Discovery Fund proposes to carefully accumulate a portfolio of stocks, which are available at a discount to its intrinsic value through a process of "Discovery". The Discovery Process would be through identification of such stocks, which have attractive valuations in relation to earnings or book value or current and/or future dividends and are available at a price, which can be termed as a bargain. This may constitute stocks, which have depreciated for a short period due to some exceptional circumstance or due to market correction phase or due to lack of interest in investing in a sector, which has significantly under performed the market.

ICICI Prudential MidCap Fund - This scheme is an open-ended scheme with an objective to generate long term capital appreciation by investing in diversified mid cap stocks portfolio. The Scheme will capitalize on the opportunities that lie in the mid-cap segment. Companies within capitalisation range of approximately Rs.100 crores to Rs.2000 crores would be considered to be mid-cap stocks and according to market analysts, such scrips tend to be the graduates of the small cap universe, and often are contenders for becoming large caps. They have graduated from the first level of existence and are picked from a pool of performers with potential. These companies are considered to have the potential of becoming the blue chips of the market tomorrow. Mid cap companies typically operate an organization with high degree of entrepreneurial spirit & flexibility than large companies and capitalize on opportunity growth.

ICICI Prudential Top 100 Fund - The AMC believes that equities outperform all other asset classes in the long run. The AMC will follow an active, value based investment style supported by in-house research. External research will be used whenever necessary. A value approach to stock picking will be the dominant theme in stock selection for the AMC. The AMC in selecting scrips will focus on the fundamentals of the business, the industry structure, the quality of management, sensitivity to economic factors, the financial strength of the company and the key earnings drivers.

Risk will also be reduced through adequate diversification of the portfolio. For a corpus size of upto Rs.100 crores, the AMC intends to invest in about 20-30 scrips. Diversification will also be achieved by spreading the investments over a diverse range of industries/sectors. The Scheme, under most market conditions does not intend investing in illiquid equity and equity related securities.

The Scheme may however, invest in unlisted and/or privately placed and/or unrated debt securities subject to the limits indicated above, from issuers of repute and sound financial standing. If investment is made in unrated debt securities, the approval of the Board of the AMC shall be obtained, as per the Regulations.

ICICI Prudential Top 200 Fund - For the equity portion of the corpus, the AMC intends to invest in stocks, which are bought, typically with a one-year time horizon. Stock specific risk will be minimized by investing only in those companies that have been thoroughly analyzed by the Fund Management team at the AMC. The AMC will also monitor and control maximum exposures to any one stock or one sector. The Scheme may also use various derivatives and hedging products from time to time, as would be available and permitted by SEBI, in an attempt to protect the value of the portfolio and enhance Unitholders' interest. The Scheme may invest in other schemes managed by the AMC or in the schemes of any other Mutual Funds provided it is in conformity to the investment an objective of the Scheme and in terms of the prevailing Regulations. As per the Regulations, no investment management fees will be charged for such investments. For the present, the Scheme does not intend to enter into underwriting obligations. However, if the Scheme does enter into an underwriting agreement, it would do so after complying with the Regulations and with the prior approval of the Board of the AMC/Trustee.

ICICI Prudential FMCG Fund - The Scheme's investments will be predominantly in equities of a select group of companies in the FMCG Sector. The AMC will be broadly guided, among other factors, while investing the Corpus of the Scheme, by the market capitalization of companies. Accordingly, the NAV of the Scheme is linked to the equity performance of such companies.

ICICI Prudential Balanced Fund: The Investment manager shall consider the following aspects for identifying the stocks to invest in: • The fund proposes to take long term call on stocks, which in an opinion of the Fund Manager offer better return over a long period. • The fund proposes to concentrate on business and economic fundamentals driven by in-depth research techniques, employing strong stock selection. Stock-picking process proposed to be adopted is generally a "bottom-up" approach, seeking to identify companies with above-average profitability supported by sustainable competitive advantages and also to use a "top-down" discipline for risk control by ensuring representation of companies from various industries. • On account of liquidity/risk considerations of the mid and small cap segment, the Fund would generally take a smaller exposure over a large number of companies. • In stocks selection process, AMC proposes to consider stocks with long-term growth prospects but currently trading at modest relative valuations given certain financial measurements such as their price-to-earnings ratios, dividend income potential, and earnings power.

Rated debt instruments in which the Scheme invests will be of investment grade as rated by a credit rating agency. The AMC will be guided by the ratings of Rating Agencies such as CRISIL, CARE, ICRA and Duff and Phelps Credit Rating India Limited or any other agency approved by SEBI, for this purpose. The AMC will also monitor and control maximum exposure to any one stock or one sector.

The Scheme may also use various derivatives and hedging products from time to time, as would be available and permitted by SEBI, in an attempt to protect the value of the portfolio and enhance Unitholders' interest.

The Scheme may invest in other schemes managed by the AMC or in the schemes of any other Mutual Funds, provided it is in conformity with the investment objectives of the Scheme and in terms of the prevailing Regulations. As per the Regulations, no investment management fees will be charged for such investments.

ICICI Prudential MIP 25 (Monthly Income is not assured and is subject to the availability of distributable surplus) : The AMC aims to identify securities, which offer superior levels of yield at lower levels of risks. With the aim of controlling risks, rigorous in depth credit evaluation of the securities proposed to be invested in will be carried out by the investment team of the AMC. The credit evaluation includes a study of the operating environment of the company, the past track record as well as the future prospects of the issuer, the short as well as longer-term financial health of the issuer. The AMC will also be guided by the ratings of Rating Agencies such as CRISIL, CARE and ICRA.

In addition, the investment team of the AMC will study the macro economic conditions, including the political, economic environment and factors affecting liquidity and interest rates. The AMC would use this analysis to attempt to predict the likely direction of interest rates and position the portfolio appropriately to take advantage of the same.

Under normal circumstances 40 - 60% of portfolio may be considered to be invested in illiquid securities. Should there be a need to liquidate part or all of these securities in a very short duration of time, the AMC may not be able to realize the full value of these securities. Consequently the NAV of the Scheme may be impacted.

The Scheme may invest in other schemes managed by the AMC or in the Schemes of any other Mutual Funds, provided it is in conformity with the investment objectives of the Scheme and in terms of the prevailing Regulations. As per the Regulations, no investment management fees will be charged for such investments.

In case the scheme intends to make investment upto 100% in securitised debt instruments, the Trustees will be informed of the same with due justification prior to making an investment decision.

ICICI Prudential MIP 5:

Fixed Income Securities: The AMC aims to identify securities which offer superior levels of yield at lower levels of risks. With the aim of controlling risks rigorous in depth credit evaluation of the securities proposed to be invested in will be carried out by the

ICICI Prudential Liquid Plan & ICICI Prudential Money Market Fund: Since providing liquidity is of paramount importance, the focus will be to ensure the same while seeking to maximize the yield. An appropriate mix of different money market securities will be used to achieve this.

ICICI Prudential Income Plan, ICICI Prudential Short Term Plan, ICICI Prudential Long Term Plan, ICICI Prudential Corporate Bond Fund and ICICI Prudential Flexible Income Plan:

The AMC aims to identify securities, which offer superior levels of yield at lower levels of risks. With the aim of controlling risks, rigorous in depth credit evaluation of the securities proposed to be invested in will be carried out by the investment team of the AMC. The credit evaluation includes a study of the operating environment of the company, the past track record as well as the future prospects of the issuer, the short as well as longer-term financial health of the issuer. The AMC will also be guided by the ratings of Rating Agencies such as CRISIL, CARE and ICRA. In addition, the investment team of the AMC will study the macro economic conditions, including the political, economic environment and factors affecting liquidity and interest rates. The AMC would use this analysis to attempt to predict the likely direction of interest rates and position the portfolio appropriately to take advantage of the same. The AMC will attempt to achieve adequate diversification of the portfolio by investing in approximately 10-15 securities for the first Rs. 100 crores of the corpus of the Scheme.

Under normal circumstances 40 - 60% of portfolio may be considered to be invested in illiquid securities. Should there be a need to liquidate part or all of these securities in a very short duration of time, the AMC may not be able to realize the full value of these securities. Consequently the NAV of the Scheme may be impacted.

The Scheme may invest in other schemes managed by the AMC or in the Schemes of any other Mutual Funds, provided it is in conformity to the investment objectives of the Scheme and in terms of the prevailing Regulations. As per the Regulations, no investment management fees will be charged for such investments.

For the present, the Scheme does not intend to enter into underwriting obligations. However, if the Scheme does enter into an underwriting agreement, it would do so with the prior approval of the Board of the AMC.

ICICI Prudential Ultra Short Term Plan: The AMC aims to identify securities, which offer superior levels of yield at lower levels of risks. Liquidity will also be an important criterion for investment decisions. As a result, a reasonable proportion of the scheme's investments will be made in relatively liquid investments. With the aim of controlling risks, rigorous in depth credit evaluation of the securities proposed to be invested in will be carried out by the investment team of the AMC. The credit evaluation includes a study of the operating environment of the company, the past track record as well as the future prospects of the issuer, the short as well as longer-term financial health of the issuer. The AMC will also be guided by the ratings of Rating Agencies such as CRISIL, CARE and ICRA.

In addition, the investment team of the AMC will study the macro economic conditions, including the political, economic environment and factors affecting liquidity and interest rates. The AMC would use this analysis to attempt to predict the likely direction of interest rates and position the portfolio appropriately to take advantage of the same.

ICICI Prudential Income Opportunities Fund: The AMC will follow a disciplined investment process to meet Fund specific investment objectives. It will aim to develop a well-diversified, quality portfolio that minimises liquidity risk and credit risk. The scheme shall construct all portfolios to ensure that obligations to investors are met on time under all circumstances.

The Fund Manager may alter the asset allocation of the scheme depending on the prevailing interest rate scenario.

When the interest rates are expected to rise, the Fund Manager may seek to increase the exposure to money market instruments with less than 1-year residual maturity in order to reduce the price risk. When the interest rates are expected to fall, the Fund Manager may seek to increase the exposure to debt instruments with more than 1 year residual maturity in order to benefit from the rise in prices of the underlying securities.

The Fund Manager seeks to enhance the portfolio yields by moving across the credit curve, by investing in investment grade debt instruments with a mix of credit rating, across the credit curve so as to generate relatively higher returns.

Among other debt instruments, the Scheme envisages to invest in securitized instruments like Loan PTCs (Pass Through Certificates), which are backed by assets, future receivables and third party guarantees. The credit analyst shall conduct an in-depth credit analysis of such securities before recommending them for investments.

The analysis is based on a strategic framework for credit analysis, which broadly divides the task into two categories: business risk and financial risk. The prime objective is to evaluate a borrower's ability and willingness to repay the debt on time. In order to assess business risk, the factors that are considered include outlook for the economy (Domestic & Global), outlook for the Industry and company specific factors.

The internal rating determined by the Credit Analyst through the credit process may or may not agree with the rating opinion given by the external agency. The difference in fund manager's opinion, if found compelling, is captured to generate relatively higher return.

ICICI Regular Savings Fund: The AMC aims to identify securities, which offer superior levels of yield at lower levels of risks. The fund will aim to generate total returns in the form of accrual income or interest income as well as through capital appreciation from buying and selling securities. Exposure to government securities is expected to be limited in order to limit volatility.

The fund investment strategy would focus on managing long-term investor monies with a view to providing superior levels of yield at lower levels of risks. The fund would cap investment per investor in its endeavor to ensure larger retail participation. This would limit large inflows and outflows in the fund thereby maintaining a stable asset size and giving stability to the fund performance. Large inflows and outflows generally impact the fund performance as the fund manager's efforts are diverted towards daily cash-flow management. The fund would also have longer period exit loads as compared to conventional debt funds. The exit loads would ensure investors invest with a slightly longer investment horizon which would enable the fund manager to invest in longer maturity, high yielding and relatively less liquid securities. The fund would maintain an optimum balance between liquid and relatively less liquid securities. The Fund intends to optimise returns by keeping its portfolio average maturity approximately 3 years. This average maturity profile is subject to change in response to the change in the market conditions.

With the aim of controlling risks, rigorous in-depth credit evaluation of the securities proposed to be invested in will be carried out by the investment team of the AMC. The credit evaluation includes a study of the operating environment of the company, the past track record as well as the future prospects of the issuer, the short as well as longer-term financial health of the issuer. The AMC will also be guided by the ratings of Rating Agencies such as CRISIL, CARE and ICRA.

In addition, the investment team of the AMC will study the macro economic conditions, including the political, economic environment and factors affecting liquidity and interest rates. The AMC would use this analysis to attempt to predict the likely direction of interest rates and position the portfolio appropriately to take advantage of the same.

ICICI Prudential Gilt Fund - Investment Plan, ICICI Prudential Gilt Fund - Treasury Plan, ICICI Prudential Gilt Fund - Investment Plan - PF Option, ICICI Prudential Gilt Fund - Treasury Plan - PF Option: The government securities market is the largest and the most liquid market in India. The Investment Manager believes that the various measures being initiated by RBI and the priority being accorded to the development of this market will lead to further deepening and widening of this market. The central and state governments raise large sums from the market every year to meet their revenue and capital expenditure. Banks, Non-Banking Finance Companies, insurance companies and provident funds are required by various statutes to invest in government securities and therefore are big investors in this market. The government securities market is expected to remain the most liquid market and provides an avenue for investment where safety is of paramount importance. The Plan will afford an opportunity to the retail investors to invest in the government securities.

Risk Management Strategies / Risk Mitigation Factors: The Fund by utilizing a holistic risk management strategy will endeavor to manage risks associated with investing in debt and equity markets. The risk control process involves identifying & measuring the risk through various risk measurement tools.

The Fund has identified the following risks of investing in equity and debt, and designed risk management strategies, which are embedded in the investment process to manage such risks.

Risk & Description Specific to Debt	Risk mitigants / management strategy
Market Risk: As with all debt securities, changes in interest rates may affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV.	The fund will invest in a basket of debt and money market securities maturing on or before maturity of the fund with a view to hold them till the maturity of the fund. While the interim NAV will fluctuate in response to changes in interest rates, the final NAV will be more stable. To that extent the interest rate risk will be mitigated at the maturity of the scheme.
Liquidity or Marketability Risk: This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market.	The Scheme may invest in government securities, corporate bonds and money market instruments. While the liquidity risk for government securities, money market instruments and short maturity corporate bonds may be low, it may be high in case of medium to long maturity corporate bonds. Liquidity risk is today characteristic of the Indian fixed income market. The fund will however, endeavor to minimise liquidity risk by investing in securities having a liquid market.
Credit Risk: Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security). Because of this risk corporate debentures are sold at a higher yield above those offered on Government Securities which are sovereign obligations and free of credit risk. Normally, the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.	A traditional SWOT analysis will be used for identifying company specific risks. Management's past track record will also be studied. In order to assess financial risk a detailed assessment of the issuer's financial statements will be undertaken to review its ability to undergo stress on cash flows and asset quality. A detailed evaluation of accounting policies, off-balance sheet exposures, notes, auditors' comments and disclosure standards will also be made to assess the overall financial risk of the potential borrower. In case of securitized debt instruments, the fund will ensure that these instruments are sufficiently backed by assets.
Reinvestment Risk: This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.	Reinvestment risks will be limited to the extent of coupons received on debt instruments, which will be a very small portion of the portfolio value.
Derivatives Risk: As and when the Scheme trades in the derivatives market there are risk factors and issues concerning the use of derivatives that Investors should understand. Derivative products are specialized instruments that require investment techniques and risk analyses different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is the possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the "counter party") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mis-pricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.	The fund has provision for using derivative instruments for portfolio balancing and hedging purposes. Interest Rate Swaps will be done with approved counter parties under pre approved ISDA agreements. Mark to Market of swaps, netting off of cash flow and default provision clauses will be provided as per international best practice on a reciprocal basis. Interest rate swaps and other derivative instruments will be used as per local (RBI and SEBI) regulatory guidelines.
Risks associated with Equity investment:	Risk mitigants / management strategy with Equity investment:
Market Risk: The scheme is vulnerable to movements in the prices of securities invested by the scheme, which could have a material bearing on the overall returns from the scheme. The value of the Scheme's investments, may be affected generally by factors affecting securities markets, such as price and volume, volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets.	Market risk is a risk which is inherent to an equity scheme. The scheme may use derivatives to limit this risk.
Liquidity risk: The liquidity of the Scheme's investments is inherently restricted by trading volumes in the securities in which it invests.	The fund will be a high risk, high return fund and the time horizon, until the market realizes the true value of the stocks that the fund has invested into, could be longer. As such the liquidity of stocks that the fund invests into could be relatively low. The fund will try to maintain a proper asset-liability match to ensure redemption / Maturity payments are made on time and not affected by illiquidity of the underlying stocks.
Derivatives Risk: As and when the Scheme trades in the derivatives market there are risk factors and issues concerning the use of derivatives that Investors should understand. Derivative products are specialized instruments that require investment techniques and risk analyses different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is the possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the "counter party") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mis-pricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.	Derivatives will be used for the purpose of hedging/ portfolio balancing purposes or to improve performance and manage risk efficiently. Derivatives will be used in the form of Index Options, Index Futures, Stock Options and Stock Futures and other instruments as may be permitted by SEBI. All derivatives trade will be done only on the exchange with guaranteed settlement. No OTC contracts will be entered into.
Tracking Error: The performance of the scheme may not be commensurate with the performance of the benchmark index on any given day or over any given period, referred to as tracking error.	The Investment Manager would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error to the maximum extent possible. The investment manager will endeavor to maintain low cash levels to minimize tracking error.
Concentration Risk: Concentration risk represents the probability of loss arising from heavily lopsided exposure to a particular group of sectors or securities.	The fund will try and mitigate this risk by investing in sufficiently large number of companies so as to maintain optimum diversification and keep stock-specific concentration risk relatively low.

For detailed risk factors and risk management strategies, kindly refer to the Scheme Information Document.
